

Anti-tamper plates

MÀTIX

ADVANTAGES

MÀTIX anti-tamper cover plates are made of metal alloy and are secured to the reinforced support using special Torx head screws.

This ensures sturdiness and security, preventing unauthorised removal of the cover plate and tampering with the light point. The plates have been subjected to antibacterial treatment, which ensures better hygiene, avoiding the proliferation of bacteria on the surface.

SUGGESTIONS FOR USE

- schools
- hospitals
- shopping centres, shops
- car parks
- public toilets
- common building parts
- stadiums, gyms
- railway stations
- airports
-
