

# Multibox®

ML03C/GB - printed 03/2003

**bticino®**

## Main features

### Main features

Multibox is a series of plastic housings designed to solve any installation requirement in the residential and services sector.

## Main features

### The range

#### Multifunction boxes

For the installation and centralisation of:

- Living International, Light, Light Tech and Magic TT wiring accessories;
- Terraneo telephone and audio door entry systems;
- Circuit breakers and DIN devices;
- 9W emergency lights.

#### Connector blocks

Available in ten standard sizes, for meeting any installation requirement.

## Main features

### Multifunction boxes

These peculiar boxes, which are available in 5 modular sizes for flush mounting, allow the realisation of different centralised functions (safety, temperature control, door entry system etc.) with devices of the modern wiring accessories series, Btdin and Terraneo Pivot series.

Multifunction control board for Light Tech devices and chrome finishing cover

Special installation kits are used for the centralisation of the devices in multifunction boxes, that are formed by a frame and a series of finishing covers available in four different colours: Light white, Living grey, chrome and Magic ivory.

The Living International, Light, Light Tech and Magic TT devices are clipped on this installation kit by means of special device-holding supporting frames; the Terraneo devices are mounted through plastic supporting frames item 16121 and 16122.

The Btdin modular devices are mounted by means of a special control board formed by a supporting frame with DIN rail and a front cover panel available in Light white or Living grey.

Living grey control board with Btdin devices

### Modularity

Thanks to the common sizes as regards both width and depth, the multifunction boxes can be coupled vertically as well as horizontally. This possibility allows the realisation of centralised control boards with devices of the modern wiring accessories series and Btdin and Terraneo equipment, that can meet any installation requirement, even the most studied ones.

For the coupling of two or more boxes, one must use the plastic side panels item 16100GV and 16100GO, which allow the cables passing through from a box to the next one, in addition to the mechanical connection. The space between two boxes coupled horizontally can be hidden by a special finishing panel that gives aesthetical continuity to the two boxes.

Multifunction control board

Installation of the finishing cover panel

## Main features

### The advantages of multifunction boxes

#### Centralisation of all functions

- Aesthetical integration of several functions.
- Horizontal and vertical modularity.

### Flexibility of installation

Side by side mounting panel for identifying the functions of the mounted devices

Single installation kit for mounting Living International, Light, Light Tech and Terraneo devices into the same box

Device-holding supporting frame, pre-set for the circuits separation (up to 18 modules can be installed)

Blanking plate for closing the cabling space

Blanking plate for aesthetical finish of the unused spaces

Possibility of mounting doors for devices protection

## Main features

### Installation examples

## Main features

### Installation examples

## Main features

### Horizontal modularity

The **horizontal modularity** makes the integration possible between a video door entry system and wiring accessories.

This is a typical situation in porter's lodges, professional offices and similar environments.

- all housings can be coupled horizontally;
- pair of joints for horizontal coupling item 16100GO;
- the finishing panel, suitable for being written, is necessary for covering the joints in horizontal installations.

### Vertical/horizontal modularity

The **vertical modularity** with centralisation of wiring accessories devices. It easily solves almost all problems of horizontal space.

- only equal boxes can be mounted side by side vertically;
- pair of joints for vertical side by side mounting item 16100GV;
- the finishing covers (16102LT etc.) hide the side by side mounting joints.

## Main features

### Branch boxes

The Multibox branch boxes represent the best possible solution for any installation requirement. In fact, they are realised in a highly shock-resistant plastic material and are fitted, along the sides, with large both round and square knockouts, to suit different pipes sections.

The boxes are pre-arranged along the sides for being equipped with special elements for side by side mounting of two or more boxes, both vertically and horizontally.

By means of plastic partition elements, the internal space of the bigger boxes can be further subdivided into up to three spaces.

*Pre-arrangement for rigid couplings, both horizontal and vertical*

*External peripheral stiffening ring*

*Large rectangular knockouts on all sides*

The boxes closing lids are realised by introducing project solutions that make the installation considerably easier:

- strengthened structure;
- bigger sizes;
- fixing through adjustable screws;
- satin finished surface for ease of painting;
- satin zones inside the covers for writing;
- the covers, complete with fixing screws, are available as spares, separately from the boxes (item 16201C, 16202C, etc.).

Satin zone inside the cover for writing purposes

## Main features

### The advantages of branch boxes

The Multibox branch boxes are characterised by following pluses:

### Functional packing

The boxes are sold complete with cover in an easy to remove packing

Cover and screws are packed together, in order not to lose the screws after having walled up the boxes. They are also available as spare parts, separately from the boxes (item 16201C, 16202C, etc.)

### Flexibility of use

Horizontal and vertical modularity through coupling elements

Large knockouts for pipes entrance

Big space for cabling

Longer screws for cover fixing

The covers are strong, large and can be easily adjusted; thanks to their satin finish, they can be easily painted

## Technical features

### Multifunction boxes

The five Multibox multifunction boxes allow to flush mount the centralisation of Living International, Light, Light Tech and Terraneo devices (audio/video door entry units of the Pivot series).

Devices of the Magic TT series can also be installed into the box item 16102. All the boxes can be horizontally mounted side by side by means of the side panels item 16100GO; on the contrary, only boxes of the same type can be mounted vertically (with side panels item 16100GV).

The installation of the Living International, Light and Light Tech devices into the boxes is made possible by the correspondent mounting kit item 16102...5LT/16102...5LTG/16102...5LCR and by the device-holding supporting frame item 16135.

Specific accessories have to be used for the Magic TT series.

For the installation of Terraneo devices, on the contrary, the mounting kit item 16101...5LT/16101...5LTG/16101...5LCR must be combined with the plastic supports item 16121 and 16122.

### Technical features

Material: shock-proof polystyrene

Temperature rating: -25°C / +60°C

Resistance: to abnormal heat and fire, up to 650°C (glow wire test according to CEI 50-11 and IEC 695-2-1)

Approval: IMQ according to CEI 23-48 (IEC 670)

Installation kit item 16102LT

Use of installation kit for Terraneo devices

Use of installation kit for Living International devices

## Technical features

### Modularity of multifunction boxes

The five Multibox multifunction boxes allow the integrated centralisation of Living International, Light, Btdin and Terraneo devices (telephone and audio/video door entry units of the Pivot series).

The Multibox multifunction boxes have all the same depth and height, whereas the width is modular as they are planned for being equipped with devices or device-holding supporting frames **70mm** wide.

### Multibox modules

Multibox modules		1	2	3	4	5
Item		16101	16102	16103	16104	16105
Installable equipment	Living International		yes	yes	yes	yes
	Light		yes	yes	yes	yes
	Light Tech		yes	yes	yes	yes
	Magic TT		yes			
	DIN consumer units			yes	yes	yes
	Terraneo Pivot (compact)	yes	yes	yes	yes	yes
	Terraneo Pivot (standard)		yes	yes	yes	yes
Internal dimensions		84x218x69	154x218x69	224x218x69	294x218x69	364x218x69
External dimensions		110x243x70	180x243x70	250x243x70	320x243x70	390x243x70

### Choice of the boxes, depending on the equipment to be mounted

The devices are mounted into the Multibox multifunction boxes by means of specific accessories or through device-holding supporting frames, like it is the case with the different series of wiring accessories.

The device-holding supporting frame or the device/ accessory as a whole takes one or more Multibox modules, everyone of them 70mm wide.

By summing up the modules taken by the different devices, one can pick out the box to be installed.

Installable devices		Multibox modules used	Installation notes
Living, Light, Light Tech devices (18 mod. on 3 rows of 6 each)		2	Frame and specific finishing accessories required
Magic TT devices (15 modules on 3 rows of 5 each)		2 *	Frame and specific finishing accessories required
Btdin consumer units	10 DIN modules	3	The Btdin consumer units are sold complete with installation accessories
	14 DIN modules	4	
	18 DIN modules	5	
Terraneo Pivot	Compact telephone or door entry unit 70mm	1	Specific supports and finishing frames required
	Standard telephone or door entry unit 140mm	2	
	Video section 140mm	2	

\* The Magic TT series can only be installed into the Multibox 2 module box item 16102

**Example:** Integrated installation of a standard Pivot audio door entry unit and 18 Light devices:  
 Audio door entry unit = 2 Multibox modules  
 Light = 2 Multibox modules  
 Total = 4 Multibox modules → box to be used item 16104

## Technical features

### Installation of Living International, Light and Light Tech devices

For the installation of Living International, Light and Light Tech devices into the Multibox multifunction boxes, the frame item 16135 must be mounted on the kits item 16102...5LT/16102...5LTG/16102...5LCR. This item, supplied with 3 device-holding supports for 6 modules, allows the installation of max. 18 Living International, Light or Light Tech modules inside the boxes item 16102, 16103, 16104 and 16105. The use of resin finishing cover plates (6 modules) item 16136F/6, 16136F/6G and 16136F/6TH makes the installation of the devices complete. The finishing blanking plates item 16136F/0, 16136F/0G or 16136F/0TH must be mounted on the device-holding supporting frames that have not been used for the installation of any equipment. Both the blanking and the 6 module cover plates are available in Light white, Living grey and Tech silver, for aesthetical integration with the devices installed. The accessories' range is completed by the hinged doors, that allow hiding the centralisation of the different devices, thus giving them a smarter appearance.

Installation of Living International devices

Finishing cover plates

Hinged doors

### Installation of Magic TT devices

Devices of the Magic TT series can be installed into the multifunction box item 16102 by means of specific accessories that allow mounting max. 15 modules on 3 rows. The installation kit required is the item 16102LAV and must be used together with the device-holding supporting frame item 16135M.

The finishing cover plate for every single row is item 16136/5M or the blanking plate item 16136/0M, in case there are no devices installed. All these components have the visible parts in Magic ivory, so as to assure the aesthetical homogeneity with the other devices.

Installation of Magic TT devices

Installation of finishing cover plate

## Technical features

### Installation of Terraneo devices

For the installation of Terraneo devices of the Pivot series into the whole range of the Multibox multifunction boxes, plastic supporting frames have been realised, available in two different versions:

- item 16121 for devices with a depth of 46.5mm;
  - item 16122 for devices with a depth of 35mm.
- These supporting frames must be clipped on the metallic rails of the kit item 16101...5LT/G and to the respective rectangular seats located on the bottom of Terraneo equipment.

Link supporting frames/rails

Installation of Terraneo Pivot telephone

### Installation of 9W emergency light

The 9W emergency light takes 2 Multibox modules and can be installed into the multifunction boxes item 16102 by means of the supporting frames item 16102LT (Light white), 16102LG (Living grey) and 16102LCR (Tech grey).

The base of the lamp, provided with plug-in connector, must be fixed to the chassis through screws; then, after having inserted the lamp itself, one must fix the finishing cover frames.

Fixation of frames to the lamp

Installation of chassis and base of the lamp

## Technical features

### Complementary accessories for multifunction boxes

#### Joints item 16100GV and 16100GO for coupling multifunction boxes

Thanks to their modular dimensions, the multifunction boxes item 16101...5 can be mounted side by side both horizontally or vertically for the centralisation of several functions.

The modularity is obtained by mounting the special plastic side joints item 16100GO and 16100GV into the seats located on the four sides of the boxes.

Moreover, these side panels make the passage easy of the cabling through every box, thus avoiding the use of common corrugated pipes.

Composition of two multifunction boxes.

#### Finishing panels item 16100FI/FIG/FITH for side by side mounting of the boxes

When two or more multifunction boxes are coupled horizontally, one can cover the intermediate space and thus give an aesthetical continuity to the composition, by using the finishing panel item 16100FI (white), 16100FIG (grey) or 16100FITH (Tech).

This item can be easily clipped on the kit item 16101...5LT/LTG/LCR and is equipped with a door and an adhesive label to be used for noting the functions carried out by the consumer unit.

Installation of the finishing panel for side by side mounting

#### Blanking plate item 16133/G/TH

The blanking plate item 16133 (white), 16133G (Living grey) and 16133TH (Tech) is used when free spaces without any equipment (70mm wide) have to be closed on multifunction boxes.

This element can be easily clipped on the metal rails of our kits item 16102...5LT/LTG/LCR by means of 4 plastic supporting frames (supplied).

The free space beneath the blanking plate can be favourably used for stuffing cables and distribution boxes.

Installation of blanking plate

## Technical features

### Recapitulation table for Living Intern. Light Tech Terraneo

# Technical features

**Consumer units for DIN devices**

The DIN consumer units widen the range of Multibox multifunction boxes, thus enriching the BTicino home consumer unit with a particularly smart version, fitted with a lid that can be activated through a pushbutton and can be combined with Terraneo Pivot video door entry units and Living International and Light equipment.

They are formed by a supporting frame with DIN rail and by a panel in two colours:

- Light white with white lid;
- Living grey with smoke-grey lid.

They do not need any other accessory.

The Multibox consumer units are available in 3 different sizes (10, 14 and 18 DIN modules).

**Technical features**  
Protection degree: IP40 with lid closed  
Material: polycarbonate  
High resistance to UV rays  
Resistance: to abnormal heat and fire, up to 650°C (glow wire test, according to CEI 50-11 and Publication IEC 695-2-1)  
Shock resistance: 0.7J (joule)  
Planning and production conform to CEI23-48 and to Publication IEC 670, CEI 23-49 and CEI EN 60439-3 (CEI 17-13/3).

Installation of the finishing covers

Opening of the lid

## Technical features

### Distribution boxes

The Multibox distribution boxes are available in 9 standard sizes for meeting any installation requirement in the residential and services sectors.

Made of polystyrene with excellent resistance to high temperatures and shocks, these distribution boxes are characterised by a wide internal space, what makes it possible to store inside them several cables and connection terminals.

The bigger boxes can be separated by means of partitions into two or more compartments for cables of different types.

Large round and square knockouts are located inside the boxes for connecting different pipes.

The covers, supplied with the box and available as spare part, are made of plastic material with excellent non-deformability and are characterised by the peculiar orange peel surface finish, that makes the painting easy.

### Technical features

Protection degree: IP40

Resistance: to abnormal heat and fire, up to 650°C

Mechanical shock resistance: 2J (joule)

IMQ approval according to CEI 23-48 and Publication IEC 670.

Table for the choice of distribution boxes

Ref. (*)	Item	Internal dimensions (mm)	External dimensions (mm)	No. of partitions that can be installed	No. of seats for cable and pipe ties	Pre-arrangement for DIN rail
BT1	<b>16201</b>	87x87x44	97x97x45		2	
BT2	<b>16202</b>	113x91x49	126x105x50		2

BT11	<b>16211</b>	493x262x69	520x289x70	2 (a corredo)	6	yes

(\*) For making the finding easier, we listed the distribution boxes following their growing size: BT1 (item 16201), BT2 (item 16202), ... BT11 (item 16211). The item BT16210 does not exist.

### Possibility of side by side mounting

For allowing fast and precise installations in any situation, the boxes can be mounted side by side. There are four groups of side by side mounting, listed in the table below.

**503ED**  
(side by side coupler for boxes BT1 ÷ BT3)

**16200G**  
(side by side coupler for boxes BT4 ÷ BT9)

By means of the side by side coupler item 16200G, the boxes can be coupled horizontally and vertically at the same time

Side by side mounting groups	Sides that can be mounted side by side	Code of side by side coupler
