4.1

Explosion-protected pendant light fittings and floodlights

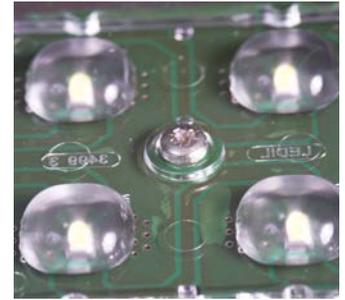

4 Fields of application and decision criteria

The suitable lighting technology for your application

Normally high pressure discharge lamps are used in combination with pendant light fittings and floodlights. They provide a high light output and a relatively long life span. Depending on the required light colour, HP metal halide lamps

or HP sodium vapour lamps are usually fitted. The compact design and the relatively low heat generation allows the use of this technology in small luminaire housings.

or HP sodium vapour lamps are usually fitted.

The innovating white high-power LED technology has an extreme long life span. Moreover, it is insensitive to vibrations and shocks. With its very high efficiency, it enables a higher intensity of light with lower power

Field of application

For this reason, these are the preferred light fittings for use in areas that are hard to access and where replacing lamps is time-consuming and difficult.

Pendant light fittings and floodlights are the ideal solution for the illumination of locations with high suspension heights

that require a high illumination level or the illumination of large complexes, surfaces or objects. Explosion-protected light fittings are used in both indoor and outdoor hazardous areas, on- and offshore areas, in production plants and storage buildings, in the chemical, petrochemical and pharmaceutical industry, as well as for the illumination of outside areas such as loading zones, harbour areas and petrol depots. Particularly in offshore areas, lighting solutions with LED technology are being used more and more because of their resistance to vibration.

Harsh operating conditions

Explosion-protected CEAG pendant light fittings and floodlights for the Zones 1, 2, 21 and 22 guarantee a safe and reliable operation, even under difficult operating conditions such as extremely high or low ambient temperatures, high humidity, dusts or aggressive explosive atmospheres. Among other things, the high ingress protection level of the light fittings, which are required for these conditions is assured even after a long period of use. A long service life and a high reliability of the used electrical and mechanical components make these lamps extremely cost-effective.

Replacing lamps made easy

We also have an efficient solution if under certain conditions a replacement of the lamps on site is not possible, e.g. when ambient temperatures are very low or due to the presence of an explosive atmosphere. With the CEAG floodlights series FZD, you simply replace the complete lamp cartridge. This speeds up the lamp replacement and helps to keep down the maintenance costs. A fast re-availability of the light fixture is ensured even under extreme environmental conditions and low ambient temperatures of -40°C . The actual replacement of the lamps in the lamp cartridge can be carried out later, for example in the workshop.

Even at extreme temperatures

We have developed suitable solutions specifically for use in environmental conditions with extremely low temperatures.

The AB 12 NAV 70 Arctic ceiling light fitting has been certified for use at ambient temperatures down to minus 50°C and the FLT 10 floodlight for an extreme temperature range from minus 55°C to plus 55°C .

4.2

Ex-Ceiling light fittings AB 80 / AB 05 LED / AB 05 / AB 12 NAV 70

4 (Zone 1, 2, 21, 22)

The wall and ceiling light fixtures for particularly difficult operating conditions

The impact-resistant and flameproof luminaires of the series AB 80, AB 05 and AB 12 provide a safe and reliable light - even at extreme ambient temperatures and under extreme environmental conditions, such as those encountered in the oil and gas production industry, in- and outdoor areas of chemical plants or in heavy industry. This is due to the robust powder-coated light metal housing, stainless steel screws and a cover or tube made of scratch-resistant borosilicate glass.

The proper illuminant for your application

The AB 05 LED luminaire has an innovative 22 W LED module. The outstanding features are not only the high energy efficiency but also the resistance to shock and vibration. The luminaires of the series AB 05 and AB 80 can be fitted with incandescent or energy-saving lamps and they are used for lighting outdoor pathways or walkways and corridors. High-pressure discharge lamps are used in the luminaire series AB 05 and AB 12 NAV for lighting applications requiring a high illumination level at particularly low ambient temperatures.

AB 80 - the standard solution

This light fitting can be fitted with incandescent lamps with an E27 socket up to 100 W and is used as a wall or ceiling light

in the chemical industry. Due to the robust enclosure and the ambient temperature range up to +55°C, this light fitting is suitable for a wide variety of applications.

vibrations, has an extremely long lamp life and has also been approved for extremely low ambient temperatures as low as minus 55 ° C. Due to an optimised light distribution for low and medium suspension heights, the AB 05 LED is ideal for illuminating walkways, corridors, stairways and storage rooms and for use in all areas with limited space.

AB 05 - solid and reliable

The winning features of the robust housing with integral wire guard are its light weight and easy installation. The ballast for high pressure discharge lamps is mounted on a removable frame. This simplifies maintenance. An internal aluminium reflector provides a uniform light distribution.

AB 05 LED - robust against vibrations

This extremely robust luminaire with integral wire guard and its high-efficiency LED module is resistant against shocks and

Features

- Extremely rugged design for extremely harsh environments
- Various illuminants can be used
- Wide ambient temperature range depending on the version (-55 ° C to +55 ° C)
- High degree of protection up to IP 67

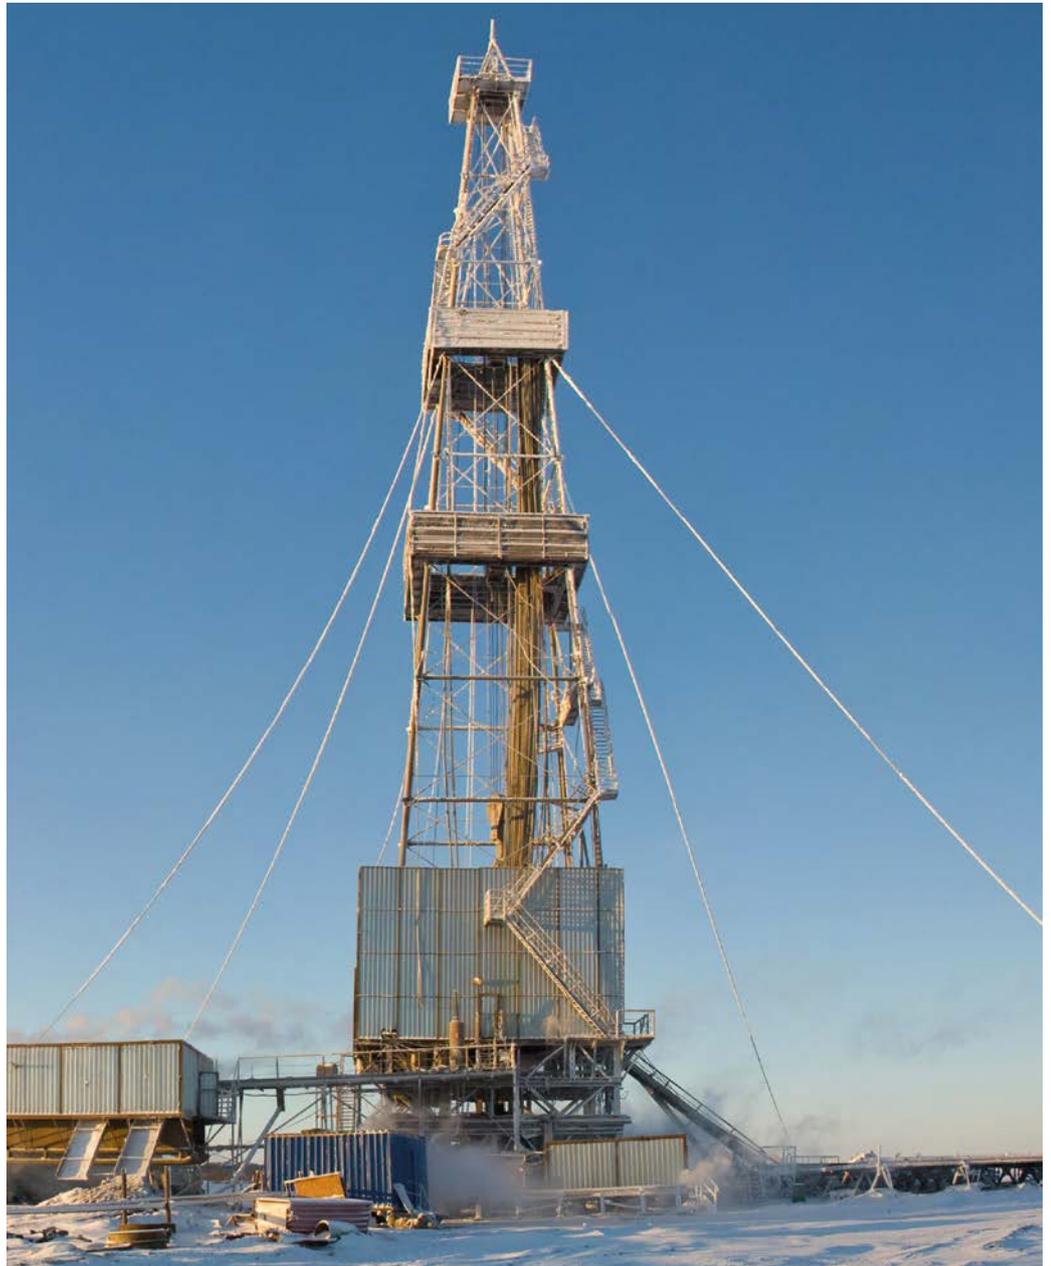

AB 12 NAV 70 - even for extreme cold environments

This compact Ex-d light fixture for high pressure sodium lamps is suitable for individual lighting solutions for areas with limited mounting space. Lamp, ballast and ignitor are incorporated on a compact module, which allows easy re-lamping and maintenance work. An optional external reflector allows individual illumination of working places. The **Arctic** version even allows the use of this versatile light fitting in extreme temperature ranges from minus 50 °C up to plus 50 °C within the highest explosion group IIC, e.g. for hydrogen atmospheres.

Ex-Pendant light fittings AB 50 / SPG 1N / AB 51 / EVI 200 / EVI 500 / EV35 LED

(Zone 1, 2, 21, 22)

The pendant light fitting series for a wide variety of applications

The explosion-protected pendant light fittings for incandescent and energy-saving lamps, high intensity discharge and induction lamps can be used with their different housing solutions in different areas. The robust flameproof luminaires have been in use in many industrial plants for many years and have stood the test of time.

AB 50 / SPG 1N and AB 51

This larger series of pendant light fittings is suitable for incandescent and mixed-light lamps. The robust light alloy enclosure allows a wide range of applications. The protective glass dome is made of borosilicate glass and is extremely impact and heat resistant. The reflector and all external screws are made of stainless steel. Easy replacement of lamps is made possible by opening the PTFE-coated connection ring. Both devices (the protective glass dome and connection ring) are provided with hinges to allow easy access. Thanks to their robust design, these light

fittings are suitable for use in the chemical industry and are certified for ambient temperatures from -55 °C to +55 °C.

EVI the powerful pendant light fitting series

This larger series of pendant light fittings is suitable for incandescent and mixed-light lamps. The robust light alloy enclosure allows a wide range of applications. The protective glass dome is made of borosilicate glass and is extremely impact and heat resistant. The reflector and all external screws are made of stainless steel. Easy replacement of lamps is

made possible by opening the PTFE-coated connection ring. Both devices (the protective glass dome and connection ring) are provided with hinges to allow easy access. Thanks to their robust design, these light fittings are suitable for use in the chemical industry and are certified for ambient temperatures from -55 °C to +55 °C.

Features

- Different housing solutions with different light sources for nearly every application
- Robust design for harsh environments
- With large Ex-d or Ex-e terminal compartment
- Wide ambient temperature range depending on the version from -50 °C up to +55 °C
- CU-Certificate for Eurasian Economic Community available
- High degree of protection IP 66
- Meets the highest corrosion protection and mechanical strength requirements

EV 35 - the efficient solution for your illumination concept for hazardous areas

The robust Ex-pendant light fitting EV 35 LED with energy saving LED-module combines state-of-the-art lighting engineering with the requirements of harsh and hazardous environments. With an efficient LED technology and with no harmful UV radiation, this series of light fittings provides a perfect illumination. Together with an internal reflector, this light fitting can also be used as a downlight.

And, last but not least, the long life and the low power consumption of the LED module helps to keep down running costs. Thanks to the extremely solid construction of the housing, this series of pendant light fittings is resistant to impact, vibrations and shocks. As a result, they provide an ideal lighting concept for applications in harsh and hazardous environments.

Even extreme ambient temperatures from -50°C up to +55 °C are no problem for the robust LED technology of the light fittings.

Ex Pendant light fittings for high-pressure discharge lamps EV. / dHLS / EVZ

4 (Zone 1, 2, 21, 22)

Ex pendant light fittings for high-pressure discharge lamps

These EV, dHLS and EVZ luminaire series are designed for the use of high-pressure discharge lamps. Ballasts and lamps are located in a common housing. The flameproof enclosures are connected via an easy-to-mount Ex-e terminal compartment. The protective cover is made of borosilicate glass and is extremely impact and heat resistant. All external

screws are made of stainless steel. The lamp replacement is done by opening the PTFE coated connection ring. Both the glass dome and the connection ring are hinged for easy access. Depending on the type, the light fittings are certified for ambient temperatures from -45 °C up to 55 °C.

EV pendant light fitting with 2 housing sizes

The EV pendant light series is suitable for use with sodium or metal halide high-pressure discharge lamps. The small enclosure solution can be used with lamps up to 125 W. The large enclosure solution is suitable for lamps with a power consumption of up to 250 W.

al safety, it has been used in chemical plants and on- and off-shore platforms for illuminating large areas and selective large objects for many years now. The light fitting is fitted with a dome-shaped glass cover and can also be fitted with an external reflector.

EVZ - highly versatile

The EVZ pendant light fittings are available in 2 versions for 70 W to 150 W and 150 W to 400 W. The luminaire can be fitted with a swivel bracket for wall or pole mounting. Two external reflectors and a protective guard are available as an option.

dHLS – the robust pendant light

The robust dHLS pendant light fitting has been certified for hazardous areas in Zones 1 and 2 and is suitable for 250 W and 400 W high pressure lamps. The housing is made of a light alloy with a powder coating. Because of its high operation-

Features

- Various enclosure-size solutions
- For high-pressure discharge lamps
- Robust design for harsh environments
- Large Ex-e terminal compartment
- Wide ambient temperature range depending on the version from -45 °C up to +55 °C
- CU-Certificate for Eurasian Economic Community available
- Meets the highest standards of corrosion protection and mechanical strength

Ex-Floodlight PXLED

Complete series of LED floodlights replacing 100 up to 600 W conventional light sources (Zone 1, 2, 21, 22)

4

Lighting under harsh conditions

The new modular LED floodlight series PXLED is suited for nearly every kind of lighting task in hazardous areas, including applications in on- and offshore, heavy industrial, chemical, petrochemical, oil and gas, pharmaceuticals, shipyards, dockyards, power generation, paper mills and wastewater treatment indoor and outdoor with potentially explosive areas under harsh conditions like vibrations, dust, moisture or corrosive atmospheres and extreme temperatures. The PXLED comes with a standard U-shaped mounting bracket for ceiling and wall mounting.

Replacement of conventional light fittings up to 600 W

With a luminous flux from 5,000 lm up to 32,000 lm this floodlight series can be used to replace nearly every floodlight with conventional light sources with an equivalent power consumption from 70 W up to 600 W.

High efficient LED technology

High efficient power LED module with 110 Lumen/Watt enables up to 70 % energy-cost savings compared to conventional HID lamp.

Safety first

All PXLED multi-module floodlights from size 10L to 30L are equipped with a multichannel LED driver. This driver provides for each LED-module a separate power channel circuit. Even if one circuit fails, all other LED-modules are still working.

Modular design - just use the size you need

Thanks to the modular design of the PXLED series you can exactly choose the lumen output you need. There is no need to over/underdesign your lighting project. Six sizes are available from nominal 5.000 lm to more than 30.000 lm with a step-wide of 5000 lm.

Easy to install

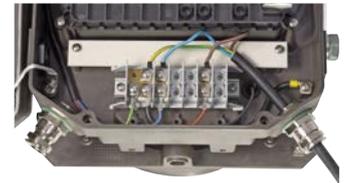

A stainless steel swivel bracket with adjustable setting angle allows an easy alignment of the floodlight. A fixing screw

secures the alignment. The swivel bracket provides up to five Ø13 mm fixing holes for a safe assembly.

Together with two cable gland a large terminal compartment in Ex-e design allows cost saving through-wiring without additional terminal boxes.

The used Ex-e terminals can clamp up to 6 mm² wiring.

Internal and external PE-terminals allows nearly all cabling technique.

5 YEAR WARRANTY

Features

- High efficiency: up to 110 lm/W
- Operating temperature -50 °C up to +55 °C
- Suitable for Explosion Group IIC / IIIC environments
- Broad range of light output from 5,000 lm up to 32,000 lm
- Wide and narrow beam pattern (asymmetric beam on request)
- Long lifetime
- Ex-e compartment for driver & terminal for easy installation and maintenance

Designed for long lifetime

High ambient temperatures can drive the LED chip-temperature into a not permissible range. This would reduce the life-span of the LEDs tremendously. Eaton provides an enclosure design with large cooling pipes and a innovated heat reduction design.

Tests, done under the worst conditions have shown, that the LED-chip temperature is always below critical values. The designed life span for the LED (L80) is more than 60,000 h even at +55°C ambient temperature

The Eaton LED driver is especially designed for the harsh conditions of hazardous environments. According to EN 61000-4-5 an electronic device must withstand a surge pulse of 1 kV between L - N, our LED driver is designed to withstand 4 kV between L - N and L, N - PE.

All electronic components with self-heating are over dimensioned to ensure a maximum maintenance-free period. The driver has an own Ex-certification "q" and is mounted within the Ex-e compartment.

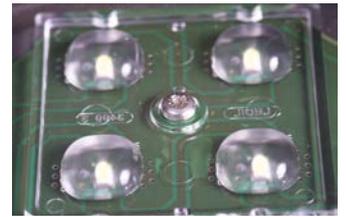

In the very unlikely event of a driver failure this unit can be exchanged separately from the floodlight.

Light distribution for various applications

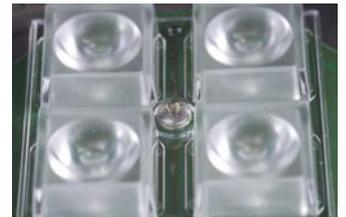

Beside the various lumen output packages, different light distributions can be realised with the PXLED-series.

A wide beam pattern as well as a narrow beam pattern is realized by the use of special designed lens caps for the LEDs. In addition, asymmetric light distributions are also available for special applications.

With a light transmission factor of more that 90 % we are able to offer a system efficiency of more than 110 lm/W.

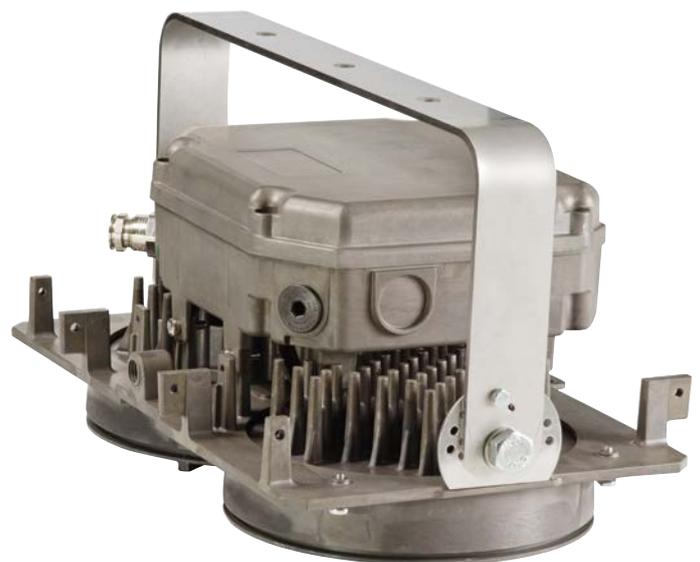

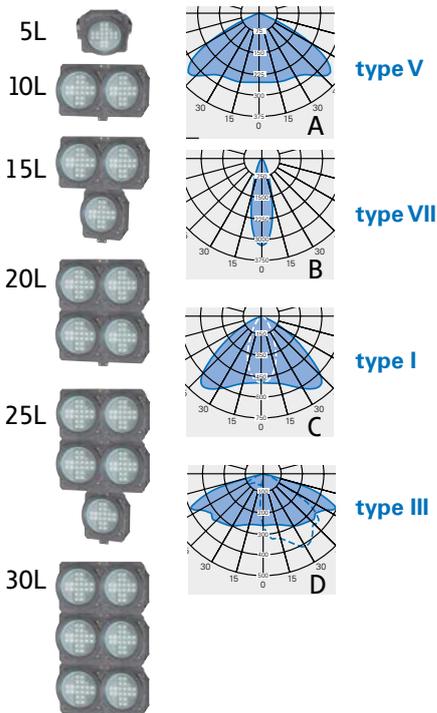

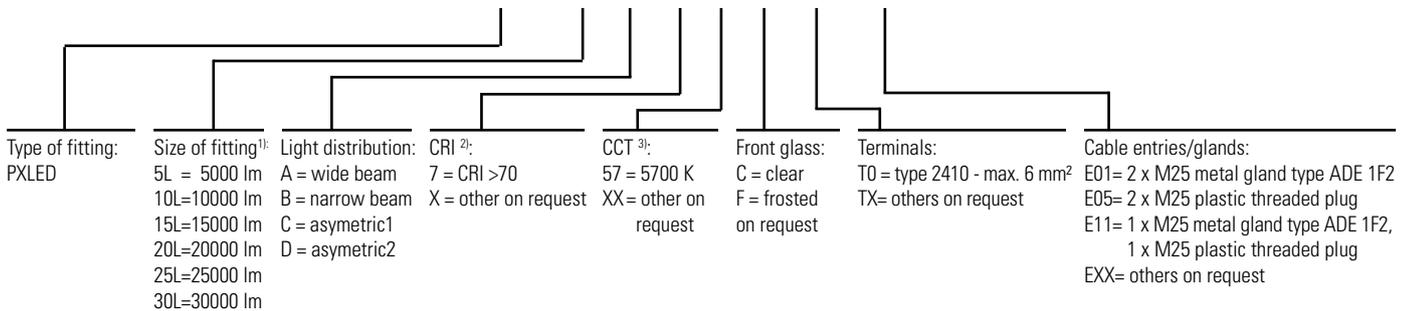

wide beam lens caps

narrow beam lens caps

Type key for PXLED floodlight series

PXLED 10L A 7 57 C T0 E01

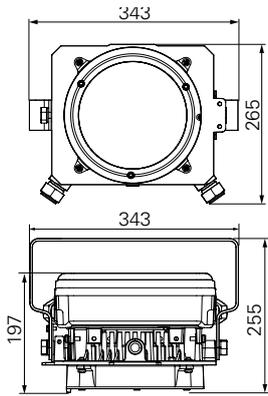

1) the lumen value is a design value and will not show the actual lumen output
 2) CRI = Colour Rendering Index

Ex Floodlights for high-pressure discharge lamps, series PX 04 and FLT 10

4 (Zone 1, 2, 21, 22)

The powerful floodlights for harsh environments

Thanks to the high degree of protection IP66, the robust floodlights of the series PX 04 and FLT 10 for hazardous areas are suitable for the illumination of large areas and objects under harsh environmental conditions, such as those found in industrial, chemical and petrochemical plants, on- and offshore oil and gas production plants, pipelines, refineries and loading ramps. High-pressure discharge lamps from 70 W to 600 W provide a high illuminance level.

PX 04 - multifunctional

The PX 04 light fitting enclosure is made of copper-free aluminium. The protective glass cover is made of scratchproof borosilicate glass; it protects the internal reflector against harmful environmental conditions.

Depending on the application, a wide beam or a narrow beam reflector can be chosen. All external screws are made of stainless steel. The easy-to-maintain electrical connection is made via a flanged-on Ex-e connection compartment. The ballast with thermal protection and a pulse ignitor with automatic shut off provides additional safety. The floodlight features an adjustable

mounting bracket that allows an optimum focussing of the light.

FLT 10 - for Arctic conditions

Specially designed for use in areas with extremely low temperatures, the FLT 10 was developed as a version of the tried and tested PX 04 floodlight. Thanks to its highly polished aluminium reflector, the FLT 10 has a high lighting efficiency of 62%. Depending on the application, a wide beam or a narrow beam reflector can be chosen. The housing design and connections are the same as those of the PX 04. As it has been certified for ambient temperatures from -55 °C up to

+55 °C, the FLT 10 is the ideal light source for use in extreme climates.

Features

- Floodlight for high-pressure discharge lamps
- Robust design for harsh environments
- High degree of protection IP 66
- With large Ex-e terminal compartment
- Depending on the version, large ambient temperature range from -55 °C up to +55 °C
- CU-Certificate for Eurasian Economic Community available
- Meets the highest corrosion protection and mechanical strength requirements

Ex-Floodlights for high-pressure discharge lamps, series FZD 04

(Zone 1, 2, 21, 22)

4

The maintenance- and installation-friendly FZD 04 floodlights for harsh operating conditions

Due to the spatial separation of the lamp module, lamp base and ballast, this powerful and robust spotlight for high-pressure discharge lamps can be installed and maintained in an easy and quick way. The Ex-e ballast enclosure with the compensation capacitor can be mounted within arm's reach. Only the light Ex-e enclosure made of copper-free aluminium for the ignitor is mounted at the desired mounting height of the floodlight and the Ex-d lamp

module is simply plugged in and locked. This allows a one-man installation without a crane or other lifting tools.

Flexibility due to modular design

All the components of the modular Ex floodlight have been certified separately as components. The flameproof lamp module can be easily separated from the housing once the locking screw has been loosened. Two sealing systems in the degree of protection IP66 ensure permanently protected Ex-d contacts.

There is no need to switch off the mains voltage to separate the module from the luminaire.

This means that a simple lamp change and easy cleaning of the lamp modules is possible, even outside the hazardous area. Optionally, the module can be fitted with narrow-angle and wide-angle reflectors – these can even be fitted retrospectively and without any additional installation work.

For extreme environmental conditions

The FZD 04 floodlight series with its maintenance-friendly replaceable lamp module and its large operating/ambient temperature range from -45 °C up to +45 °C is the ideal solution for illuminating large areas and plants in challenging climates.

A special advantage

The simple and quick exchanging of the lamp module means that changing the lamp is not a problem, even under extreme weather or climate conditions (snow, ice, and particularly low ambient temperatures).

Features

- Easy lamp replacement due to the Ex-d lamp module
- Modular design of housing Ex-e/Ex-d
- High degree of protection IP 66
- Optional internal wide beam or narrow beam reflector
- Can be used in ambient temperatures as low as -45 °C
- CU-Certificate for Eurasian Economic Community available

Ex-Floodlight for high-pressure discharge lamps dTLS 85

4 (Zone 1, 2)

Ex-floodlight for high-pressure discharge lamps

The robust dTLS 85 floodlight and the GHG 664 emergency pack for use in hazardous areas in Zones 1 and 2 are suitable for illuminating large areas and objects. Due to the high degree of protection IP66, they are best suited for harsh environments, such as offshore oil and gas production plants or industrial, chemical and petrochemical plants, oil and gas production plants, pipelines, refineries and loading ramps. High-pressure discharge lamps from 70 W to 250 W provide a high illuminance level.

dTLS 85 - versatile

The dTLS 85 floodlight has a robust Ex-d enclosure made of powder copper-free aluminium with a powder-coating. The pressed-in, threaded ring for the flameproof joints made of brass. This facilitates the replacement of lamps, even after a longer operating period. The protective glass is made of scratchproof borosilicate glass; it protects the lighting technology against harmful environmental influences. The floodlight has been designed for outdoor use. The vaporized reflectors are designed for various angles of light diffusion.

The easy-to-maintain electrical connection is made via an Ex-e terminal compartment. The floodlight features an adjustable mounting bracket that allows an optimum focussing of the light.

the powerful explosion-protected dTLS 85070 P floodlight, escape routes and evacuation equipment (life boats, life rafts, abseiling equipment or rescue cushions, etc.) can be safely illuminated, even from larger distances. The GHG 664 emergency pack has a flameproof enclosure for electronics components and a flanged-on, increased safety enclosure for the battery and the terminals. The dTLS 85070 floodlight, which is to be mounted separately, features a powerful lighting technology, with which, for example, at a mounting height of 9 m, an area of 15 x 15 m can be illuminated with 1 lux.

GHG 664 emergency pack

This robust and extremely reliable emergency supply unit was developed specifically for use on offshore installations and ships. In the event of a power failure, the GHG 664 emergency pack allows the battery-back-up operation of the dTLS 85070 P floodlight with a 70 W high pressure sodium lamp for a period of 1.5 hours. When used in combination with

Features

- For the efficient illumination of large objects
- Robust housing made of light alloy with powder coating
- Easy lamp replacement, even after a long period of use
- High-gloss reflectors for different diffusion angles
- Large Ex-e connection box for easy installation
- CU-Certificate for Eurasian Economic Community available
- GHG664 emergency pack: safe light for evacuation equipment in hazardous areas with an emergency light duration of 1.5 hrs during power failure; maintained and non-maintained with switch-off device (only 220- 240 V)
- Suitable for use on offshore platforms and ships

Ex-LED-Floodlight LPL LED

(Zone 1, 2, 21, 22)

4

The powerful LED floodlight for harsh operating conditions

Due to the particularly robust and solid design of the enclosure in combination with the vibration resistance of the LED module, the LPL LED floodlight is insensitive to impact, shocks, and vibrations. As a result, the LPL LED represents the ideal lighting concept for use in areas with difficult environmental conditions. Thanks to the LED technology, extreme temperatures from -36 °C up to +55 °C are not a problem. The rugged, flameproof light metal enclosure in the degree of protection IP 66 and the impact-resistant light output meets the highest corrosion protection and mechanical resistance requirements.

An efficient lighting technology

The LPL LED lighting series offers the latest lighting technology with a high luminous flux and, at the same time, an extremely low energy requirement. The LED modules provide a long service life combined with a high level of efficiency. With a power consumption of 53 W to 105 W, the LPL LED lighting series is ideal for replacing 70 W to 250 W light fittings with high pressure discharge lamps, whereby, the low energy consumption and the long service life (> 50,000 h) of the LED module keep operating costs pleasantly low.

Multiple applications

The LPL LED lighting series is suitable for medium and high suspension heights. It is the ideal solution for the illumination of open spaces, indoor areas and roads in industrial installations. Further applications include on- and offshore plants in the oil and gas industry, chemical plants, waste disposal

facilities, shipyards, power stations and mills where extreme amounts of dirt and moisture and increased mechanical hazard are to be expected. A U-shaped mounting bracket for wall and ceiling installation of the LPL LED is included.

Features

- High-power LED modules with up to 63% energy saving
- Flameproof enclosure for Zones 1, 2, 21 and 22 and temperature class T6
- Wide temperature range from -36 °C to +55 °C
- CU-Certificate for Eurasian Economic Community available
- High degree of protection IP 66 for harsh environments
- Large Ex-e terminal compartment for ease of installation

4.10

Ex-Tank inspection luminaire KFL

(Zone 1, 2, 21, 22)

4

The compact luminaire for the process industry

The robust and compact explosion-protected KFL tank inspection light fitting is used in all sectors of the process industry for the illumination of boiler interiors, tanks and agitators. The light features special mounting stands which can be attached to different inspection windows of sizes DN 40 to DN 200 in accordance with DIN 28120. As an option, the KFL can be easily carried and stably placed by a carry handle for temporary illumination. The housing is made of copper-free aluminium and has a lens made of impact-resistant borosilicate glass. The aluminium collar has a PTFE coating (Teflon) and is sealed with a Viton seal.

Multifunctional use

In addition to the use for illuminating boilers, this tank inspection light fitting can be used in combination with a carry handle as a maintenance and repair light. High-voltage halogen reflector lamps as well as high-power LED lamps can be used. In addition to that, versions are also available in low voltage applications for halogen reflector as well as for LED lamps.

The extremely robust design of this fitting, the resistance to chemicals and UV and the high degree of protection IP 66 allow the use of this light fitting even under extremely harsh conditions.

Features

- Compact design
- Portable version with carry handle available
- Ready to connect for 230 V AC and low voltage 12/24 V AC/DC
- With 50W halogen reflector lamp or high-power LED lamp up to 10W
- High luminous efficacy
- Generously dimensioned terminal compartment
- Mounting onto inspection windows according to DIN 28120
- High degree of protection IP66

Ex-Pendant light fittings and floodlights of the series VMV LED

4 (Zone 2, 21, 22)

The powerful floodlight with LED technology VMV LED

The energy-saving VMV pendant light fittings and floodlights with LED technology are ideal for all general lighting applications in hazardous areas in Zone 2 and hazardous dust areas in Zones 21 and 22. With the integrated high-power LED technology, these lights can be used to replace comparable conventional light sources with an equivalent capacity of up to 1000 W.

LED technology for heavy-duty use

Due to the particularly solid construction of the housing and the vibration resistance of the LED module, the VMV floodlight is resistant to impact, shock and vibration. As a result, it represents the ideal lighting concept for use in areas with difficult environmental conditions. Thanks to the non-sensitive LED technology, even extreme temperatures from -40 °C up to +65 °C are not a problem. The robust, powder-coated light metal housing in the degree of protection

IP66 and the impact-resistant lens meet the highest corrosion protection and mechanical resistance requirements. The advantages of the integrated, advanced LED technology with a high luminous flux and, at the same time, an extremely low energy consumption are a long service life and a high level of efficiency. With a power consumption of 29 W to 232 W, it is ideal for replacing 70 W to 1000 W light fittings with high pressure lamps.

The best lighting technology for every application

The VMV LED pendant light fittings and floodlights series are available with 3 different custom optics:

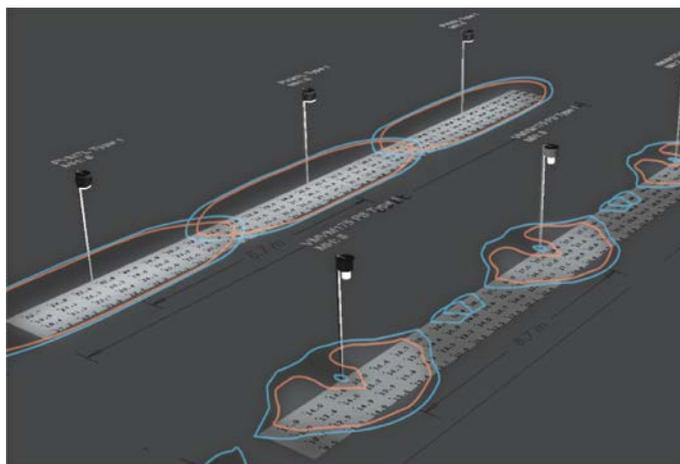

Type V has a symmetric light distribution and is optimised for general area illumination.

Type III has an asymmetrical light distribution and is, therefore, suitable for near-edge mounting (wall mounting) for surface illumination.

Type I has a narrow light distribution and is ideal for lighting roads and pathways.

Champ VMV with Type I optics (left row) compared to conventional fixtures (on the right)

Features

- High power LED modules
- Multiple drivers
- High efficient heat sink design for optimised thermal management
- Wide temperature range from -40 °C up to +65 °C (depends on type)
- High degree of protection IP66 for harsh environments
- Dimmable by control input 0-10 V

4.12

Ex-Pendant light fittings and floodlights of the series NVMV

4 (Zone 2, 21, 22)

NVMV pendant light fittings for high-pressure discharge lamps

The NVMV series of pendant light fittings for high-pressure discharge lamps in IEC metallic design is suitable for operation in hazardous areas in Zone 2 and Zones 21/22, in particular in harsh environments with high mechanical load, moisture and dust.

The lights are available in 2 sizes: The small enclosure for lamps from 70 W to 250 W (preferably 70-150 W); the large enclosure for lamps of 250 W and 400 W. All versions can be operated with both HSE and HIE lamps and are suitable for low and medium suspension heights. Thanks to their high degree of ingress protection and wide temperature range, this series can also be used under extreme conditions.

Wide range of applications

The NVMV lighting series is suitable for wall, ceiling and pole mounting. This makes them the ideal solution for almost any industrial applications, such as the illumination of open spaces, indoor areas and roadways in industrial plants in the oil and gas industry, chemical plants, waste disposal facilities, shipyards, power stations and mills.

Features

- NVMV S / M pendant light fittings for high pressure discharge lamps
- From 70 W to 400 W
- Wide temperature range from -45 °C up to +55 °C
- High degree of ingress protection IP66 for harsh environments

Ex-Floodlights of the series FMV LED / NFMV / NSSFMV

4 (Zone 2, 21, 22)

The powerful LED floodlights FMV/nFMV...LED

The new series of energy-saving FMV floodlights in LED technology are ideal for all general lighting applications in explosive gas atmospheres Zone 2 and in explosive dust atmospheres Zone 21 and 22.

The floodlights with a light output from 3189 lm up to 15181 lm can be used to replace comparable conventional light sources with an equivalent power of 50 W up to >1000 W. The new types NFMV 25L and 50L can even replace highest luminous flux power up to >1000 W of conventional HP lamps.

High efficient power LED modules with more than 112 lumen per watt enables up to 70 % energy cost reduction compared to HID fixtures.

LED technology for harsh environments

Due to the particularly solid construction of the housing and the vibration resistance of the LED module, the FMV LED floodlight is resistant to impact, shock and vibration. As a result, it represents the ideal lighting concept for use in areas with difficult environmental conditions. Thanks to the non-sensitive LED technology, even extreme temperatures from -40 °C up to +55 °C are not a problem. The robust, powder coated light metal housing in the degree of protection IP 66 and an impact-resistant lens meet the highest corrosion protection and mechanical resistance requirements. The advantages of the integrated, advanced LED technology with a high luminous flux and, at the same time, an extremely low energy consumption are a long

service life and a high level of efficiency.

NFMV floodlights for high-pressure discharge lamps

The NFMV floodlights with high-gloss internal reflectors for high-pressure discharge lamps from 150 W up to 400 W are suited for operation in hazardous areas in Zone 2 and Zone 21 and ambient temperatures of -25 °C to +50 / 45 °C. The light metal housing with an epoxy resin powder coating and a glass that is resistant to temperature changes and impacts meets the requirements for the degree of protection IP66. The modular design allows a fast and economical installation. A durable sealing system for use in extreme ambient conditions offers additional security. The restricted breathing design allows high light outputs and, at the same time, a favourable temperature class T3.

Impact-resistant glass meets the requirements of the degree of protection IP66. The modular design allows a fast and economical installation. A durable sealing system for use in extreme ambient conditions offers additional security. The restricted breathing design allows high light outputs and, at the same time, a favourable temperature class T3.

Wide range of applications

The particularly rugged construction, the high degree of protection and the wide temperature range make these light fittings particularly suitable for offshore applications, in the oil and gas industry and in chemical plants, where explosive atmospheres are to be expected. Further applications include use in explosive gas atmospheres in Zone 2 areas such as oil refineries, ships and drilling platforms, chemical, petrochemical and LNG facilities, waste and wastewater facilities, as well as industrial applications indoors and outdoors. Applications in explosive dust atmospheres in Zone 21 and 22 include flour mills, sugar mills, food production, wood processing and other plants with combustible dusts. The NFMV / NSSFMV floodlights feature an adjustable mounting bracket and are suitable for wall and ceiling mounting in medium and large suspension heights. Accessories for pole mounting are also available.

Stainless steel NSSFMV floodlights for particularly harsh environments

The NSSFMV floodlights with high-gloss internal reflectors for high-pressure discharge lamps from 150 W to 400 W fulfil the requirements for hazardous areas in Zone 2 and Zone 22 and ambient temperatures from -25 °C to +55 / 50 °C particularly in harsh environments with a high level of mechanical load, moisture and dust. The stainless steel enclosure with a temperature-change and im-

Features

- FMV LED floodlights for high power LED modules
- NFMV and NSSFMV luminaires for high-pressure discharge lamps from 150 W to 400 W
- Wide temperature range according to type from -45 °C up to +55 °C
- High degree of protection IP66 for harsh environments
